Helmet Shape 101

European Headform

An Oval shaped helmet is designed for a rider's head with a dimension which is considerably fit for Europeans.

Generic headform

A generic headform helmet is designed for a rider's head with a dimension which is slightly longer front-to-back than its side-to-side measurement.

Asian headform

A Round shaped helmet is designed for a rider's head with a dimension which is considerably fit for Asians.

Helmet Size:

Helmet size is measured in centimeters (cm) and is based on the circumference of your head. To determine your helmet size, use a soft measuring tape to measure around your head, just above your eyebrows. The measurement should be taken around the widest part of your head. Once you have your measurement, compare it to the manufacturer's size chart. Most helmets are available in sizes ranging from 54 to 62 cm. It's important to choose a helmet that fits snugly but comfortably. A helmet that is too loose can shift around and provide less protection, while a helmet that is too tight can be uncomfortable and restrict your vision. If you're unsure of your size, it's always best to consult with a professional at a helmet shop.
